JOHN RUSSEL USI

Mandaluyong, NCR, Philippines | johnrusselusi@ymail.com | +639760239389

SENIOR IOS ENGINEER

TECHNICAL SKILLS

- Swift
- SwiftUI
- Claude Skills
- UIKit
- Swift Package Manager
- CI/CD
- Python
- AWS
- Jenkins
- Core Data
- Agile
- Firebase
- Realm
- Rest APIs
- Fastlane

PROJECTS

Trucker Path: Truck GPS & Fuel June 2023

- Developed and maintained various features, including real-time updates on truck stops, fuel prices, and parking availability. Implemented GPS navigation optimized for trucks and integrated Core Location and MapKit for route planning.

Trucker Path: Load Board June 2023

- Developed key features such as real-time load search and booking, integrated messaging, and financial management tools. Worked on enhancing the user interface and improving overall app performance.

Swapoo Wallet November 2017

- Developed the app entirely on my own and managed the delivery to the App Store. Later led a team to implement additional features like a trading bot and KYC functionality. Also participated in developing the APIs of this app.

WORK EXPERIENCE

iOS Developer - RenRen Giantly Philippines, Inc. June 2023 - June 2026

- Leveraged AI-assisted development tools (e.g., Cursor, Claude Code) to accelerate debugging, refactoring, and feature delivery while maintaining code quality.
- Refactored legacy screens into reusable, flexible UI components, reducing duplicate code and supporting multiple provider configurations.
- Improved UI/UX stability and responsiveness through Auto Layout fixes, standardized design patterns, and proper loading/error states.

iOS Developer - Key Discovery Consulting September 2022 - June 2023

- Implemented OAuth-based request retry mechanisms and API caching with Core Data to improve reliability in low-connectivity environments.
- Developed features using ReactiveSwift, Swift Combine, and MVVM to streamline asynchronous data flow and state management.
- Collaborated with senior client developers to deliver new features, resolve bugs, and maintain production app stability.

Lead Full Stack Developer - Swapoolabs, Inc. November 2017 - August 2022

- Built and led development of a bitcoin wallet iOS app with trading-bot features, including backend microservices and AWS serverless infrastructure.
- Architected scalable systems using Alamofire, Moya, AWS Lambda, SQS/SNS, CI/CD (Fastlane + Jenkins), and maintained ~95% automated test coverage.

- Built and led development of a bitcoin wallet iOS app with trading-bot features, including backend microservices and AWS serverless infrastructure.
- Architected scalable systems using Alamofire, Moya, AWS Lambda, SQS/SNS, CI/CD (Fastlane + Jenkins), and maintained ~95% automated test coverage.

iOS Developer - Yondu, Inc. February 2017 - November 2017

- Led development of a clinic search iOS app from scratch, including project planning, architecture, and App Store release management.
- Integrated the app with legacy backend systems and built a custom networking framework for SOAP web service communication.
- Collaborated directly with the client's Vice President on project planning, timelines, and delivery coordination.

iOS Developer - KLAB Cyscorpions July 2014 - January 2017

- Led a development team in building a QR-based timekeeping app from scratch, including planning, specifications, and delivery timelines.
- Developed core app features for employee time-in/time-out workflows using unique QR code scanning.
- Contributed to a restaurant search app using Apple Maps and initiated its migration from Objective-C to Swift.
